SECOND CHANCE

Health Monitoring Dashboard

Product Overview & User Guide

Rehabilitation & Recovery Program

Version 1.0 · Confidential

1. Program Overview

Second Chance is a comprehensive health monitoring dashboard designed to support rehabilitation and recovery programs. It provides staff and case managers with a single, unified view of every participant's well-being — from biometric vitals and daily activity to location status and program progression.

The platform enables care teams to act quickly on emerging risks, track long-term improvement, and ensure each participant remains on track through a structured six-phase recovery journey.

Total Participants: 127 individuals enrolled across all phases

Active Alerts: 5 real-time alerts currently requiring attention

Average Trust Score: 68% — a key indicator of participant progress

Compliance Rate: 94% — participants meeting program requirements

2. Platform Navigation

The dashboard is organized into five main sections, each accessible from the left-hand navigation sidebar. Each section serves a distinct operational purpose for care teams.

Section	Purpose
Dashboard	High-level real-time overview of the entire facility
Participants	Full participant directory with filtering, search, and individual profiles
Alerts	Live monitoring and response hub for flagged incidents
Reports	Generate, print, and download program reports
Settings	Configure notifications, security, and system preferences

3. Dashboard — Real-Time Overview

The Dashboard is the home screen of Second Chance. It gives care managers an at-a-glance view of the facility's health, surfacing the most critical information without requiring navigation to individual profiles.

3.1 Biometric Trend Charts

Four live charts display aggregated health patterns across all participants:

- Heart Rate Trends — Compares the current 24-hour heart rate profile against the 7-day rolling average. Reference thresholds mark low (below 60 bpm), elevated (above 100 bpm), and critical (above 120 bpm) ranges.
- Weekly Activity — Shows total daily step counts over the past week, benchmarked against a 10,000-step daily goal.
- Sleep Quality — Displays nightly sleep duration alongside a quality score (0–100), giving a composite picture of rest patterns.
- Stress Analysis — Tracks stress levels across a 24-hour window, color-zoned as Low (0–33), Moderate (34–66), and High (67–100).

3.2 Participant Snapshot Table

A summary table lists the top 10 participants, showing each person's trust score, current program phase, and any outstanding alerts. Staff can click directly into a full profile from this view.

3.3 Alerts Panel

The five most recent unacknowledged alerts appear in a dedicated panel on the dashboard, enabling immediate awareness of urgent situations without navigating away.

4. Participants — Directory & Profiles

The Participants section provides a complete, searchable directory of all enrolled individuals. It is the primary workspace for case managers responsible for day-to-day monitoring.

4.1 Search & Filter

- Search by participant name or unique ID (e.g., SC-001)
- Filter by program phase (Phase 1 through Phase 6)
- Filter by status: Active, Inactive, or Alert
- Export participant data for external reporting
- Navigate through pages when the participant list is large

4.2 Directory Table

Each row in the directory displays the following information:

Column	Description
Participant	Photo avatar with full name and age

Column	Description
ID	Unique program identifier (e.g., SC-001)
Phase	Visual progress indicator showing current phase out of six
Trust Score	Circular progress gauge showing score from 0–100
Enrolled	Date the participant joined the program
Status	Color-coded badge: Active, Inactive, or Alert
Actions	Quick links to view the full profile or generate a report

4.3 Trust Score Colour Coding

Trust scores are visually colour-coded across the entire platform to enable fast assessment:

Score Range	Indicator	Meaning
75 – 100	Green	Good standing — participant progressing well
50 – 74	Amber	Warning — may require additional support
Below 50	Red	Critical — immediate staff intervention needed

5. Individual Participant Profile

Clicking 'View' on any participant opens a detailed profile page. This provides a full picture of that individual's health, location, activity history, and program standing.

5.1 Profile Header

At the top of the profile, staff can see the participant's name, ID, age, enrollment date, current trust score, and a visual bar showing their progress through the six program phases.

5.2 Live Health Metrics

Five real-time metric cards update continuously with the participant's most recent readings:

Metric	What It Measures	Healthy Range
Heart Rate	Beats per minute	Normal: 60–100 bpm
HRV	Heart Rate Variability	Normal: 40–80 ms

Metric	What It Measures	Healthy Range
Steps Today	Daily step count	Goal: 8,000 steps
Last Night Sleep	Hours + quality score	Ideal: 7–9 hours
Stress Level	Scale of 0–100	Healthy: below 50

5.3 Personal Charts

The same four charts from the Dashboard (heart rate, activity, sleep, stress) are reproduced here but scoped exclusively to the individual participant, enabling deeper trend analysis.

5.4 Location Status

A location card shows the participant's current GPS coordinates and zone classification:

- Safe — participant is within approved areas
- Monitored — participant is in a designated watch zone
- Restricted — participant has entered a prohibited area; a flag is raised automatically

5.5 Recent Activity Timeline

A chronological log captures key events such as check-ins, wake-up times, location updates, and alert triggers — giving case managers a clear narrative of the participant's day.

5.6 Medical Verification Records

A historical log of all medical verification checks, including the date each check was conducted and the recorded result (e.g., Clean, Verified).

6. Alerts — Monitoring & Response

The Alerts section is the real-time incident hub. It consolidates all flagged events across all participants in one place, allowing staff to respond swiftly and document their actions.

6.1 Alert Types

Alert Type	What It Means
HRV Spike	A sudden drop in Heart Rate Variability, indicating acute stress or a health event

Alert Type	What It Means
Idle Alert	The participant has been inactive during high-risk evening hours (6 PM – 10 PM)
Location Alert	The participant has entered a restricted or closely monitored zone
Sleep Anomaly	Sleep patterns fall outside the expected healthy range
Heart Rate Anomaly	Heart rate has remained elevated for a sustained period

6.2 Severity Levels

Level	Colour	Guidance
Critical	Red	Immediate attention required — escalate to the duty team
Warning	Amber	Review and respond within a short timeframe
Info	Blue	Informational only — no urgent action needed

6.3 Alert Actions

For each alert, a staff member can take one of three actions:

- Acknowledge — Mark the alert as reviewed and handled
- Contact — Initiate a call to the participant directly from the platform
- Dismiss — Remove the alert from the active list

6.4 High-Risk Hours

The platform applies heightened monitoring between 6 PM and 10 PM each day. During this window, idle-behaviour alerts are more sensitive, stress readings are given greater weight, and location tracking is intensified. This period reflects research-backed patterns of elevated risk for participants in recovery programs.

7. Reports — Insights & Documentation

The Reports section enables authorized staff to generate, print, and download formal program documentation for internal review, stakeholder briefings, and compliance records.

7.1 Available Report Types

Report Name	Contents
Monthly Summary	A complete snapshot of facility-wide performance and participant activity for the month
Progress Report	An in-depth look at an individual participant's journey and milestones
Financial Report	Payment history, outstanding balances, and billing summaries
Program Analytics	Enrollment trends, phase completion rates, and program-wide statistics
Alert Summary	Patterns in alert frequency, types, and staff response times
Trust Score Analysis	Trust score trends and developments across individuals or cohorts

7.2 Report Actions

- Generate — Compile and render the report from live data
- Print — Send directly to a connected printer
- Export All — Download all recent reports in a single batch
- Download — Retrieve any previously generated report from the recent-reports archive

8. Settings — System Configuration

The Settings section allows authorized administrators to customize how Second Chance behaves, who can access it, and how participant data is managed.

Configuration Area	What You Can Control
Notifications	Enable or disable alert sounds, desktop pop-ups, email notifications, and SMS messages
Security	Configure two-factor authentication, session timeouts, access logging, and data encryption
Data Management	Set data retention periods, schedule backups, choose export formats, and manage system access
User Management	Add or remove team members, assign roles and permissions, and review user activity logs
Monitoring	Adjust data sync frequency, dashboard refresh rate, alert thresholds, and location tracking settings

9. Trust Score System

The Trust Score is a central concept in Second Chance. It is a dynamic number between 0 and 100 that reflects each participant's overall standing in the program, combining compliance behaviour, biometric health signals, and activity patterns.

The score serves as a simple, consistent language for care teams — a green score at a glance tells a very different story from a red one, enabling fast prioritisation across a large participant base.

Green (75–100): Participant is in good standing and progressing through the program

Amber (50–74): Participant may be experiencing challenges; enhanced support is recommended

Red (below 50): Participant requires immediate intervention from the care team

10. Six-Phase Program Structure

Every participant progresses through a structured six-phase recovery journey. Progress through phases is earned through demonstrated trust scores and consistent compliance with program requirements.

Phase 1	Phase 2	Phase 3	Phase 4	Phase 5	Phase 6 ✓

Each phase is visualised throughout the platform using filled and unfilled progress indicators, so any team member can immediately see how far along a participant is on their recovery journey without reading through detailed records.

11. Sample Participant Data

The following participants represent the range of profiles captured within the system, illustrating the diversity of phases, trust scores, and statuses actively managed by the care team.

ID	Name	Age	Phase	Trust Score	Status
SC-001	Arun Kumar	24	3	72	Active
SC-002	Rajesh Nair	28	4	85	Active

ID	Name	Age	Phase	Trust Score	Status
SC-003	Vineeth Thomas	22	2	45	Active — Critical
SC-004	Mohammed Faris	26	5	91	Active
SC-005	Kevin Mathew	30	6	88	Inactive

12. Sample Active Alerts

The table below shows the six alerts currently in the system, reflecting the types of real-time situations that the care team monitors and responds to.

Alert ID	Type	Severity	Participant	Status
ALT-001	HRV Spike	Critical	Vineeth Thomas	Unacknowledged
ALT-002	Idle Alert	Warning	Joseph Sebastian	Unacknowledged
ALT-003	Location Alert	Critical	Vineeth Thomas	Unacknowledged
ALT-004	Sleep Anomaly	Info	Ravi Shankar	Acknowledged
ALT-005	Idle Alert	Warning	Anand Pillai	Unacknowledged
ALT-006	Heart Rate Elevated	Warning	Suresh Kumar	Acknowledged

13. Future Enhancement Roadmap

The following capabilities are planned for future versions of the Second Chance platform, expanding its reach, intelligence, and integration with participant care.

Enhancement	Description
Live Biometric Streaming	Real-time data feeds directly from wearable devices worn by participants
Interactive Map View	A visual map interface showing participant locations across facility zones
PDF Report Export	One-click export of fully formatted reports including embedded charts
Role-Based Access Control	Tiered login system ensuring staff only access data relevant to their role
Device Integration	Direct connectivity to health wearables for automated data ingestion
Push Notifications	Instant mobile and desktop alerts for critical incidents

Enhancement	Description
Long-Term Trend Analysis	Multi-month pattern detection to identify sustained improvement or decline
Care Team Messaging	Secure in-platform messaging between staff and participants
